

## **Application form with research question (example)**

### **1. Applicant**

(...)

### **2. Current employer**

(...)

### **3. Title of the project (max 20 words), formulated as a research question**

Titel (Engels)      How can mobile devices like smartphones be used in education?

Titel (Nederlands)      Hoe kan je mobiele toestellen zoals smartphones gebruiken in het onderwijs?

**Concise summary of the problem definition (maximum 300 words): what is the problem, what are you going to do to answer the research question, how are you going to do the research)**

If you are on an internship (stage loopt) your employer expects you to be able to solve many of the problems that you experience yourself and that you adequately respond to what you encounter. Unfortunately, what you learned in school before the internship often isn't enough. Since all students have mobile phones that can record sounds and pictures (stills or movies) it's possible for them to send information / questions to their fellow students and their teachers so that they can receive almost immediate help in solving the problems that they encounter or feedback to better deal with the situations they encounter. My research question is, thus, how can you best use these tools for learning during an internship? I would like to form small groups or communities of interns with their supervisors and equip them with these tools and see if this leads to better learning and how this can be optimized.
