## International dependence

- To what extent does a country want to depend on its energy supply from abroad?

MIJNWATER, BASIS VOOR DUURZAME ENERGIE

[WWW.MIJNWATER.COM](http://WWW.MIJNWATER.COM)

**Open Universiteit**

[www.ou.nl](http://www.ou.nl)

## Energy ambitions of cities

- Ambition cities: become energy-neutral in the foreseeable future
- Phasing out fossil input: like gas for heating
- What are the characteristics a future city without natural gas supply of the future look energetically? (supply and demand of energy, scenario's)
- Which infrastructure ensures a reliable and affordable CO<sub>2</sub>-free city? (all-electric, district heating, thermal E-net, hybrid)
- How do we finance the transformation of existing infrastructure and buildings?

MIJNWATER, BASIS VOOR DUURZAME ENERGIE

[WWW.MIJNWATER.COM](http://WWW.MIJNWATER.COM)

**Open Universiteit**

[www.ou.nl](http://www.ou.nl)

## Fundamental choices

After 2023 fundamental other measures are needed:

- Large quantities of energy should be “harvested”, transported and stored at an acceptable price
- Substantial investment in the next 50 year needed to replace the natural gas infrastructure
- Policies should be formulated timely; cities should develop a long-term vision and stick to it

# Long term ambition (example: Parkstad Limburg)

# Renewable energy supply options for urban areas

Much attention for PV, wind and bio-energy

Problems:

- Nuisance (wind)
- Spatial use (bio-energie)
- Strong fluctuations in time (seasonly / daily)

MIJNWATER, BASIS VOOR DUURZAME ENERGIE

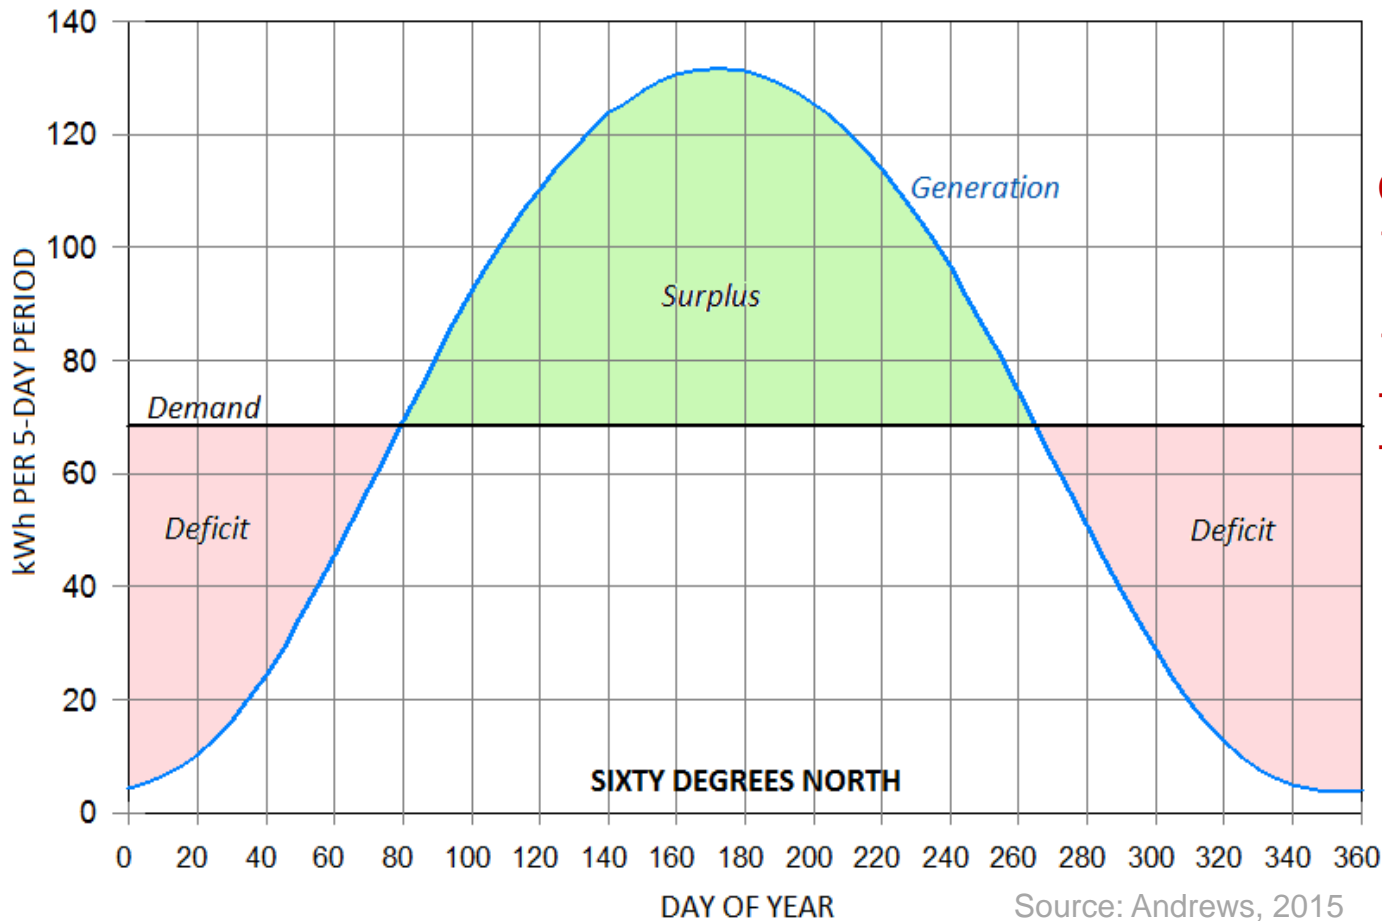

[WWW.MIJNWATER.COM](http://WWW.MIJNWATER.COM)

**Open Universiteit**

[www.ou.nl](http://www.ou.nl)

# Demand and supply do not match

Cover winter shortages:  
1522 kWh to be stored;

153 Tesla 10kWh wall units  
- costs: \$535500  
- mass: 15.3 ton

MIJNWATER, BASIS VOOR DUURZAME ENERGIE

WWW.MIJNWATER.COM

Open Universiteit

www.ou.nl

# Sustainable energy supply of built environment

## Characteristic:

- 70 % of present energy demand in buildings concerns **heat** (supplied by natural gas).

[www.ou.nl](http://www.ou.nl)

# National application

National gas use  
for houses:  
310 PJ/yr

Investment space:  
€ 5,9 billion/ yr

€ 14.500,- per house  
+ € 4.000,- avoided  
costs boiler

Net present value in  
30 year: € 100 billion

MIJNWATER, BASIS VOOR DUURZAME ENERGIE

WWW.MIJNWATER.COM

Open Universiteit

www.ou.nl

## Conclusion

- Good opportunities for (entire) sustainable heat supply to urban built environment
- Besides energy saving:
  - Smart **exchange** at different spatial scales (re-use)
  - **Buffering** op LT-heat/cold at different spatial scales (re-use)
  - Use of large **availability of low-exergetic** (waste) heat
  - Heat/cold just in time, at the right spot, at the needed temperature (applying heat pump)
  - Required investment space becomes available free because there are no fossil fuel costs anymore
